

Project Application Form for Researchers

Please submit this form and supporting documents to researchrequests@omico.org.au

- Name:**
- Organisation:**
- Role:**
- Email:**
- Project title:**
- Date of request:**

Please include the following elements in addition to this application form

- Scientific proposal (up to six pages) including background, aims, hypotheses, significance, research plan with details of methods to be used and references. This should include the rationale for quantity of biospecimens requested (if applicable), including considerations of statistical analysis and statistical power.
- Completed Omico Data and/or Biospecimen Request Forms (as applicable)
- Evidence of ethical clearance for the project including copies of approved institutional human research ethics applications and all correspondence with the human research ethics committee. Where applicable, this must be provided from each of the participating institution.
- Evidence of approval for a grant application that has already undergone peer review by a funding agency. Wherever possible, Omico would appreciate receiving copies of the referees’ reports.
- Information on the resources available to conduct the research (including source of funds, personnel, and maintenance).
- Short CVs of the Investigator(s).
- An outline of consulting agreements, collaborations and research projects between investigators named on the application and commercial organisations, detailing any intention to commercialise.

Please indicate which cohorts will be included in this project (our staff can guide you on the appropriate selection):

Omico.

We/I hereby seek permission from Omico to undertake the research work detailed in the attached project application according to the conditions specified by Omico. We/I will sign the Omico Material Transfer Agreement and will not distribute the material or data to third parties. We/I will acknowledge our study on any resulting publications. We/I will meet the costs involved in preparing and shipping biospecimens and in extracting data from the central database. We/I realise that there is the potential that this human biological material may contain infectious agents, and therefore should be handled appropriately.
